NEERAJ NARNOLIA

FULL-STACK DEVELOPER

Jamtara | 7250823834 | neerajnarn2016@gmail.com | Portfolio | GitHub

PROFILE SUMMARY

Full-stack developer with hands-on experience across the stack — Python (Django, FastAPI) and Node.js/Express on the backend, Angular and React with TypeScript on the frontend. Skilled at designing RESTful APIs, implementing JWT-based authentication from scratch, and working with MySQL and MongoDB. Proven problem-solver with 150+ algorithmic challenges solved, and comfortable integrating AI/LLM APIs (Gemini, Groq) and using AI coding assistants to accelerate development.

EXPERIENCE

SWE Intern — Meander Software, Mohali

- Assisted in developing and maintaining backend APIs under the guidance of senior developers.
- Worked with REST APIs, databases, and Git in a collaborative development environment.
- Helped debug and test backend features, gaining experience writing clean, maintainable code.
- Collaborated with the team to understand backend architecture and software development best practices.

PROJECTS

Resumator — AI Resume Curation & Mock Interview Platform Live Site | GitHub | *Express.js, MongoDB, React, **JWT**, Groq API*

- Built a full-stack platform solo (MERN-style: React, Express.js, MongoDB) for AI-assisted resume creation and mock interviews.
- Implemented JWT-based authentication from scratch, including password **hashing** and token verification **middleware**, to secure user accounts.
- Integrated the Gemini API for AI-assisted resume content generation and the Groq API to power an interactive mock-interview feature.
- Designed RESTful API endpoints connecting the React frontend to the Express backend for resume management and interview sessions.

Personal Portfolio — Single Page Application Live Site | GitHub | *Angular, TypeScript*

- Built and deployed a personal portfolio SPA using **Angular** and **TypeScript**, structured around reusable **components** and services.
- Implemented Angular routing for multi-section navigation and a reactive form (Angular Reactive Forms) for the contact section, including input validation.
- Managed shared UI state via **Angular services**, and **deployed** the application on Netlify.

T&C Risk Analyzer — Browser Extension + AI/ML Backend GitHub *Python, FastAPI, Node.js, TypeScript, NLP*

- Built **RESTful APIs** using FastAPI and Node.js to handle data processing pipelines, clause segmentation, and browser extension integration.
- Implemented hash-based **caching** and change detection using cryptographic hashing and Redis to avoid redundant processing.
- Created and labeled a legal-clause dataset and trained a text classification model for risk detection (NLP pipeline).|

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, C++
- **Frontend:** Angular (Components, Services, Routing, Reactive Forms), React, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, Django, FastAPI, RESTful API Design, JWT Authentication
- **Databases:** MySQL, MongoDB, Database Design
- **Tools & Infrastructure:** Git, GitHub, Linux, Docker, Vercel, Netlify
- **AI-Assisted Development:** Integrated Gemini & Groq LLM APIs into applications; daily use of AI coding assistants (e.g. Claude) across the dev workflow

EDUCATION

- **Bachelors in Computer Applications** — CGPA: 8.2/10, 2023–2026 — Panjab University, Chandigarh
  Relevant Coursework: Data Structures & Algorithms, DBMS, Computer Networks, Software Engineering
